

# Water Heater

## Thermo Top Evo 5 Parking Heater

## Installation Documentation Lexus LS 460 / LS 600h

### Validity

Manufacturer	Model	Type	EG-BE No./ABE
Lexus	LS 460	F4	e6 * 2001 / 116 * 0108 * ...
Lexus	LS 600h	HF4	e6 * 2001 / 116 * 0109 * ...

Motorisation	Fuel	Transmission type	Output in kW	Displacement in cm <sup>3</sup>	Engine code
4.7 P	Petrol	AG	280	4608	1UR-FSE
5.0 P hybrid	Petrol	AG	290	4969	2UR-FSE

AG = Automatic transmission

**LS 460 starting with model year 2009**

**LS 600h starting with model year 2009 up to 2012**

**Left-hand drive vehicle**

**Verified equipment variants:** Automatic air-conditioning  
 Front fog light  
 Headlight washer system  
 Cruise control

**Not verified:** Passenger compartment monitoring

**Total installation time:** about 9.5 hours

### Note:

**Only experts in high-voltage systems for vehicles should be authorised to carry out independent work on hybrid vehicles!**

**The high-voltage system must be taken out of operation, secured and reactivated according to the manufacturer's instructions.**

## Necessary Components

- Basic delivery scope of *Thermo Top Evo* based on price list
- Installation kit for Lexus LS 460 / LS 600h 2009 Petrol: **1316670B**
- Heater control in accordance with price list and upon consultation with end customer
- In case of Telestart, indicator lamp in accordance with price list and in consultation with end customer

Optional for Lexus Hybrid	
Battery Full Charge Indicator	DENG5-56380-37
Battery charger MXS 3.8	DENG5-MXS38-37

## Installation instructions

- Arrange for the vehicle to be delivered with the tank only around ¼ full!
- The installation location of the push button in the case of Telestart or Thermo Call should be confirmed with the end customer.
- Depending on the available space and manufacturer's instructions, we recommend the use of a vehicle battery with more electrical capacity.

## Installation Overview

### Legend:

1. Heater
2. Fuse holder of engine compartment
3. Relay and fuse holder of passenger compartment
4. IPCU
5. Circulating pump
6. Digital timer
7. Metering pump

## Notes on Total Installation Time

The total installation time includes the time needed for mounting and demounting of the vehicle-specific components, the heater specific installation time and all other times required for the system integration and initial start-up of the heater.

The total installation time may vary for vehicle equipment other than provided.

## Information on Operating and Installation Instructions

### 1 Important Information (not complete)

#### 1.1 Installation and Repair

The improper installation or repair of Webasto heating and cooling systems can cause fire or the leakage of deadly carbon monoxide, leading to serious injury or death.

To install and repair Webasto heating and cooling systems you need to have completed a special company training course and have the appropriate technical documentation, special tools and special equipment.

Installation and repair may ONLY be carried out by persons trained and certified in a Webasto training course. NEVER try to install or repair Webasto heating or cooling systems if you have not completed a Webasto training course, you do not have the necessary technical skills and you do not have the technical documentation, tools and equipment available to ensure that you can complete the installation and repair work properly.

Only use genuine Webasto parts. See the Webasto air and water heaters accessories catalogue for this purpose.

#### 1.2 Operation

To ensure safe operation, we recommend having the heater checked every two years by an authorised Webasto dealer, especially when used over a long period and/or under extreme environmental conditions.

Do not operate the heater in closed rooms due to the danger of poisoning and suffocation.

Always switch off the heater before refuelling.

The heater may only be used with the prescribed fuel Diesel (DIN EN 590) or petrol (DIN EN 227).

The heater may not be cleaned with a high-pressure cleaner.

#### 1.3 Please note

ALWAYS follow all Webasto installation and operating instructions and observe all warnings.

To become familiar with and understand all functions and properties of the heater, the operating instructions must be read carefully and observed at all times.

For proper, safe installation and repair work, the installation instructions with all warnings and safety information must be carefully read and observed at all times. Please always contact a workshop authorised by Webasto for all installation and repair work.

#### Important

**Webasto shall assume no liability for defects, damage and injuries resulting from a failure to observe the installation, repair and operating instructions of the information contained in them.**

**This liability exclusion particularly applies to improper installations and repairs, installations and repairs by untrained persons or in the case of a failure to use genuine spare parts.**

**The liability due to culpable disregard to life, limb or health and due to damage or injuries caused by a wilful or reckless breach of duty remain unaffected, as does the obligatory product liability.**

**Installation should be carried out according to the general, standard rules of technology. Unless specified otherwise, fasten hoses, lines and wiring harnesses to original vehicle lines and wiring harnesses using cable ties. Insulate loose wire ends and tie back. Connectors on electronic components must audibly snap into place during assembly.**

**Sharp edges should be fitted with rub protection. Spray unfinished body areas, e.g. drilled holes, with anti-corrosion wax (Tectyl 100K, Order No. 111329).**

**Observe the instructions and guidelines of the respective vehicle manufacturer for demounting and mounting vehicle specific components!**

**The initial startup is to be executed with the Webasto Thermo Test Diagnosis.**

**When installing a programmable control module (e.g. a PWM Gateway), the corresponding settings must be checked or adjusted.**

### 2 Statutory regulations governing installation

Guidelines	Thermo Top Evo
Heating Directive ECE R122	E1 00 0258
EMC Directive ECE R10	E1 04 5627

#### Note

The regulations of these guidelines are binding in the scope of the Directive 70/156/EEC and/or 2007/46/EC (for new vehicle models from 29/04/2009) and should also be observed in countries in which there are no special regulations.

#### Important

Failure to follow the installation instructions will result in the invalidation of the type approval for the heater and therefore invalidation of the general **homologation of the vehicle**.

#### Note

The heater is licensed in accordance with paragraph 19, section 3, No. 2b of the StVZO (German Road Traffic Licensing Authority).

### 2.1 Excerpt from ECE regulation 122 (heating system) paragraph 5 for the installation of the heater

Beginning of excerpt.

#### ANNEX VII

#### REQUIREMENTS FOR COMBUSTION HEATERS AND THEIR INSTALLATION

##### 1. GENERAL REQUIREMENTS

1.7.1. A clearly visible tell-tale in the operator's field of view shall inform when the combustion heater is switched on or off.

##### 2. VEHICLE INSTALLATION REQUIREMENTS

###### 2.1. Scope

2.1.1. Subject to paragraph 2.1.2. combustion heaters shall be installed according to the requirements of this Annex.

2.1.2. Vehicles of category O having liquid fuel heaters are deemed to comply with the requirements of this Annex.

###### 2.2. Positioning of heater

2.2.1. Body sections and any other components in the vicinity of the heater must be protected from excessive heat and the possibility of fuel or oil contamination.

2.2.2. The combustion heater shall not constitute a risk of fire, even in the case of overheating. This requirement shall be deemed to be fulfilled if the installation ensures an adequate distance to all parts and suitable ventilation, by the use of fire resistant materials or by the use of heat shields.

2.2.3. In the case of M2 and M3 vehicles, the heater must not be positioned in the passenger compartment. However, an installation in an effectively sealed envelope which also complies with the conditions in paragraph 2.2.2 may be used.

2.2.4. The label referred to in paragraph 1.4 or a duplicate, must be positioned so that it can be easily read when the heater is installed in the vehicle.

2.2.5. Every reasonable precaution should be taken in positioning the heater to minimise the risk of injury and damage to personal property.

###### 2.3. Fuel supply

2.3.1. The fuel filler must not be situated in the passenger compartment and must be provided with an effective cap to prevent fuel spillage.

2.3.2. In the case of liquid fuel heaters, where a supply separate to that of the vehicle is provided, the type of fuel and its filler point must be clearly labelled.

2.3.3. A notice, indicating that the heater must be shut down before refuelling, must be affixed to the fuelling point. In addition a suitable instruction must be included in the manufacturer's operating manual.

###### 2.4. Exhaust system

2.4.1. The exhaust outlet must be located so as to prevent emissions from entering the vehicle through ventilators, heated air inlets or opening windows.

###### 2.5. Combustion air inlet

2.5.1. The air for the combustion chamber of the heater must not be drawn from the passenger compartment of the vehicle.

2.5.2. The air inlet must be so positioned or guarded that blocking by rubbish or luggage is unlikely.

###### 2.6. Heating air inlet

2.6.1. The heating air supply may be fresh or recirculated air and must be drawn from a clean area not likely to be contaminated by exhaust fumes emitted either by the propulsion engine, the combustion heater or any other vehicle source.

2.6.2. The inlet duct must be protected by mesh or other suitable means.

###### 2.7. Heating air outlet

2.7.1. Any ducting used to route the hot air through the vehicle must be so positioned or protected that no injury or damage could be caused if it were to be touched.

2.7.2. The air outlet must be so positioned or guarded that blocking by rubbish or luggage is unlikely.

End of excerpt.

In multilingual versions the German language is binding.

## Notes on Validity

This installation documentation applies to the Lexus LS 460 / LS 600h Petrol vehicles - for validity, see page 1 - from model year 2009 and later, assuming technical modifications to the vehicle do not affect installation, any liability claims excluded. Depending on the vehicle version and equipment, modifications may be necessary during installation with respect to this installation documentation.

Vehicle- and engine types, equipment variants and other specifications not listed in this installation documentation have not been tested. However, installation according to this installation documentation may be possible.

## Technical Instructions

### Special Tools

- Hose clamp pliers for self-clamping hose clamps
- Hose clamp pliers for Clic hose clamps of type W
- Automatic wire stripper 0.2 - 6mm<sup>2</sup>
- Crimping pliers for cable lug / tab connector 0.5 - 6mm<sup>2</sup>
- Torque wrench for 2.0 - 10 Nm
- Hose clamping pliers
- Metric thread-setter kit
- Webasto Thermo Test Diagnosis with current software

### Dimensions

- All dimensions are in mm

### Tightening torque values

- Tightening torque values of 5x13 heater bolts and 5x11 heater stud bolts = 8Nm.
- Tightening torque values of 5x15 bolt of water connection piece retaining plate = 7Nm
- Tighten other bolt connections in accordance with manufacturer's instructions or in accordance with state-of-the-art-technology.

## Explanatory Notes on Document

You will find an identification mark on the outside top right corner of the page in question to provide you with a quick overview of the individual working steps.

Special features are highlighted using the following symbols:

<b>Mechanical system</b>		<b>Specific risk of injury or fatal accidents</b>	
<b>Electrical system</b>		<b>Specific risk due to electrical voltage</b>	
<b>Coolant circuit</b>		<b>Specific risk of damage to components</b>	
<b>Combustion air</b>		<b>Specific risk of fire or explosion</b>	
<b>Fuel</b>		<b>Reference to general installation instructions of the Webasto components or to the manufacturer's vehicle-specific documents</b>	
<b>Exhaust gas</b>		<b>Reference to a special technical feature</b>	
<b>Software</b>		<b>The arrow in the vehicle icon indicates the position on the vehicle and the viewing angle</b>	
		<b>Tightening torque according to the manufacturer's vehicle-specific documents</b>	

## Preliminary Work

### Vehicle

- Open the fuel tank cap.
- Ventilate the fuel tank.
- Close the fuel tank cap again.
- Depressurise the cooling system.
- Deactivate the high voltage system in accordance with the manufacturer's instructions for hybrid vehicles.
- Disconnect the battery from the on-board power supply network.
- Remove the air filter.
- Remove the engine cover.
- Remove the coolant expansion tank.
- Remove the bumper trim.
- Detach the ventilation duct for the brake located to the right of the bumper.
- Remove the bumper.
- Remove the underride protection.
- Remove the underbody trim on the right.
- Remove the rear bench seat on the left.
- Open the tank-fitting service lid on the right.
- Remove the fuel-tank sending unit in accordance with the manufacturer's instructions.
- Remove the left footwell trim.
- Remove the glove compartment.

### Heater

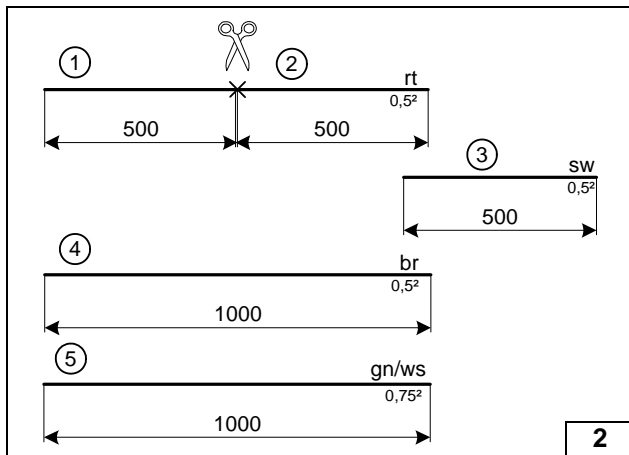

- Remove years that do not apply from the type and duplicate label.
- Attach the duplicate label (type label) in the appropriate place inside the engine compartment.

### Heater Installation Location

- 1 Heater

Installation location

### Preparing Electrical System

Wire sections retain their numbering throughout the whole document.

**Cutting wires to length**

Check settings before heater startup and adjust if necessary.

Settings:

Duty cycle: 65%  
 Frequency: 400Hz  
 Voltage: not relevant  
 Function: Low side

**IPCU connections**

Connect the lines to the IPCU socket as per the following connection diagram.

- 1 IPCU socket
- ① Red (rt) wire of IPCU/15
- ② Red (rt) wire of IPCU/E
- ③ Black (sw) wire of IPCU/A
- ④ Brown (br) wire of IPCU/85

**Premounting IPCU**

**IPCU connection diagram**

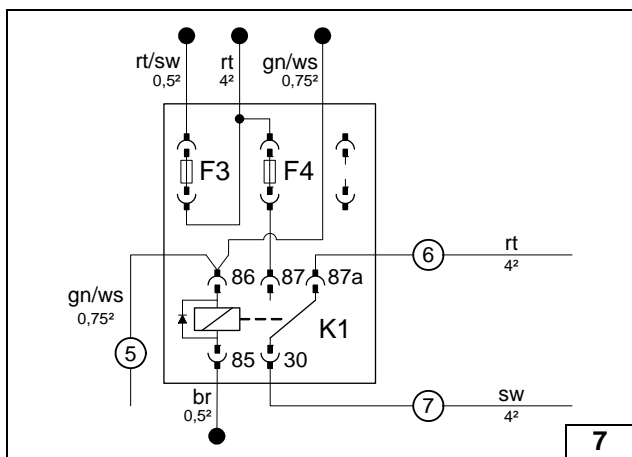

Loosen and remove contact K1/86.  
Install wires as shown in the following connection diagram using the contacts supplied.

- 1 Relay and fuse holder of passenger compartment
- 2 Green/white (gn/ws) wire of K1/86
- 5 Green/white (gn/ws) wire of K1/86
- 6 Red (rt) wire of K1/87a fan wiring harness
- 7 Black (sw) wire of K1/30 fan wiring harness

**Preparing passenger compartment relay and fuse holder**

Pull wire 5 into the provided protective sleeving .

**Passenger compartment relay and fuse holder connection diagram**

After installation of the angle bracket, insert K1 relay and 10A fuse F4 in the passenger compartment relay and fuse holder.

- 1 M5x12 bolt, washers [2x], nut
- 2 Relay and fuse holder of passenger compartment
- 3 Angle bracket

**Preparing passenger compartment relay and fuse holder**

**Removing connector of metering pump**

## LS 460 Electrical System

### Fuse holder of LS 460 engine compartment

- 1 M6x16 bolt, large diameter washer, flanged nut, existing hole
- 2 Angle bracket
- 3 Fuses F1-2
- 4 M5x16 bolt, washer [2x], retaining plate of fuse holder, nut

### Wiring harness pass through of engine compartment, connection of earth wire LS 460

- 1 Protective rubber plug
- 2 Earth wire on earth support point

Wiring harness routing diagram

### Connecting LS 460 positive wire

- 1 Positive wire on positive support point

### Passenger compartment wiring harness pass through

- 1 Protective rubber plug
- 2 Wiring harness of heater and heater control

## LS 600h Electrical System

### Connecting earth wire LS 600

- 1 Original vehicle earth support point

### Connecting LS 600 positive wire

- 1 Original vehicle positive support point

Wiring harness routing diagram

Fuse holder of LS 600 engine compartment

- 1 Fuses F1-2
- 2 M5x16 bolt, washer [2x], retaining plate of fuse holder, nut
- 3 Original vehicle flanged nut
- 4 Angle bracket

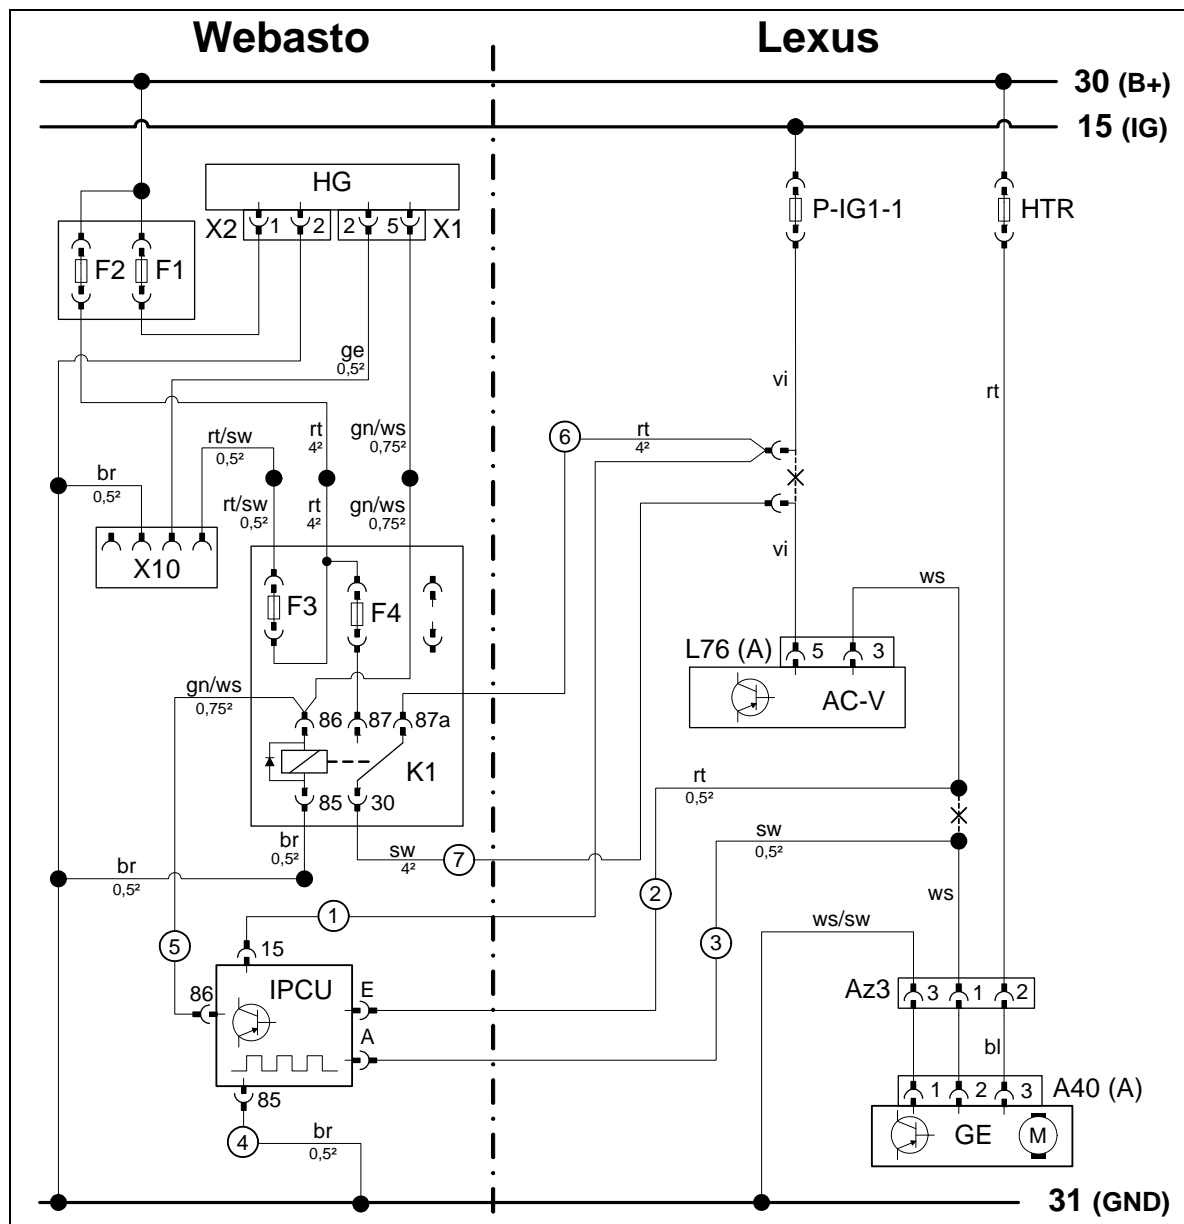

Wiring harness pass through LS 600

- Protect wiring harnesses with corrugated tubes.
- 1 Protective rubber plug

Fan Controller

Wiring diagram

Webasto components		Vehicle components		Colours and symbols	
HG	TT-Evo heater	P-IG1-1	10A fuse	rt	red
X1	6-pin heater connector	HTR	50 A fan fuse	ws	white
X2	2-pin heater connector	AC-V	A/C booster	sw	black
F1	20A fuse	L76 (A)	White (ws) 35-pin connector A/C-V	br	brown
F2	30A fuse	Az3	3-pin connector	gn	green
X10	4-pin connector Heater control	GE	Fan unit	vi	violet

F4	10A fuse				
K1	Fan relay				
IPCU	Pulse width modulator				
<b>IPCU settings:</b>					
Duty cycle: 65%					
Frequency: 400Hz					
Voltage: not relevant				X	Cutting point
Function: Low side				Wiring colours may vary.	

Legend

- 1 Original vehicle bolt
- 2 Angle bracket

**Installing passenger compartment relay and fuse holder**

- 1 Relay and fuse holder wiring harness of passenger compartment
- 2 Wiring harness of heater

**Connecting wiring harnesses using same colour wires**

Connection on white (ws) 35-pin connector L76 (A) 1, Pin 5 from A/C booster.  
Produce connections as shown in wiring diagram.

- 2 Violet (vi) wire of connector L76 (A)
- 3 Violet (vi) wire from fuse P-IG1-1
- ① Red (rt) wire of IPCU/15
- ⑥ Red (rt) wire of K1/87a fan wiring harness
- ⑦ Black (sw) wire of K1/30 fan wiring harness

**Connecting A/C booster**

Connector L76 (A) on contact side.

- 1 Angle bracket
- 2 M5x16 bolt, washers [2x], nut
- 3 IPCU socket

**Premounting IPCU socket**

Prior to installation, insert green/white (gn/ws) wire ⑤ into IPCU/86 socket. Install IPCU.

- 1 Original vehicle bolt

**IPCU instal-  
lation**

Connection to 3-pin connector A3 1 of fan unit. Produce connections as shown in wiring diagram.

- 2 White (ws) wire to connector Az3
- 3 White (ws) wire from A/C control panel Pin 3
- ② Red (rt) wire of IPCU/E
- ③ Black (sw) wire of IPCU/A

**Connect-  
ing IPCU**

- 1 Original vehicle earth support point
- ④ Brown (br) wire of IPCU/85, cable lug

**Connect-  
ing earth  
wire**

### Combination Heater Controls

Only for "silver" transmitter.  
See provided installation instructions for "black" transmitter.

Telestart T91 with and without push button.

**Figure 25** (Y-adaptor of connector)

Detach violet (vi) wire 2 from 6-pin connector 1 Pin5 and insert it in Pin2

**Preparing  
connector**

**Digital timer and Telestart T91.**

**Figure 26a** (Y-adapter coupling, wire-side view)

Detach, insulate and tie back violet (vi) wire 4 from 4-pin coupling 1 Pin1.  
Detach black (sw) wire 5 from 4-pin coupling 1 Pin2 and insert it in Pin1.

**Preparing connector**

**Figure 26b** (connector of Y-adapter)

Detach black (sw) wire 3 from 6-pin connector 2 pin 3 and insert it in pin 2.

**Telestart T100 HTM with and without push button.**

**Figure 27** (connector of ESV adapter)

Detach violet (vi) wire 2 from 6-pin connector 1 Pin5. Cut yellow (ge) wire 3 approx. 50mm before connector 1. Connect violet (vi) wire 2 and yellow (ge) wire 3 to connector.

**Preparing connector**

**Digital timer and Telestart T100 HTM!**

**Figure 28a** (ESV adapter coupling, view on the side of the wires)

Detach, insulate and tie back violet (vi) wire 5 from 4-pin coupling 1 Pin1.  
Detach black (sw) wire 6 from 4-pin coupling 1 Pin2 and insert it in Pin1.

**Preparing connector**

**Figure 28b** (connector of ESV adapter)

Detach black (sw) wire 4 from 6-pin connector 2 Pin3. Cut yellow (ge) wire 3 approx. 50mm before connector 2. Connect black (sw) wire 4 and yellow (ge) wire 3 to connector.

**Heater controls diagram**

### Digital Timer

1 Digital timer

Installing digital timer

### Telestart

Detach player 2 and fasten receiver 1 with adhesive tape.

Installing receiver

Stick on antenna 1 in the black area of the windscreen.

Installing antenna

### Temperature sensor T100 HTM

Fasten temperature sensor 1 with adhesive tape.

Installing temperature sensor

### Preparing Heater

- 1 Exhaust pipe  
a = 130 mm
- 2 Exhaust end section  
b = 25 mm

Discard section X

Preparing exhaust pipe

### LS 460

Hose H will be cut to length later. Discard section X.

- A = 110
- B = 730
- C = 170
- D = 60
- E = 120
- F = 860
- G = 90
- J = 55
- K = 270

Cutting hoses to length

Push braided protection hose onto hose B, F and K and cut to length.  
Cut heat shrink plastic tubing to length.

- 1 Heat shrink plastic tubing, 50 mm long [6x]

Preparing hoses

### LS 600h

Hose G will be cut to length later. Discard section X.

- A = 500
- B = 170
- C = 60
- D = 120
- E = 750
- F = 90
- I = 240

Cutting hoses to length

Push braided protection hose onto hose **A** and **E** and cut to length.  
Cut heat shrink plastic tubing to length.

- 1 Heat shrink plastic tubing, 50 mm long [6x]

**Preparing hoses**

**All vehicles**

- 1 Water connection piece, sealing ring [2x each]
- 2 5x15 self-tapping bolt, retaining plate of water connection piece

**Installing water connection piece**

Hose **D** = heater inlet LS 460h  
Hose **E** = heater outlet LS 460h  
Hose **C** = heater inlet LS 600h  
Hose **D** = heater outlet LS 600h

- 1 18x18mm, 90° connecting pipe [2x]
- 2 25mm dia. spring clip [4x]

**Premounting hoses**

- 1 90° moulded hose, 10mm dia. clamp [2x]
- 2 Fuel line

**Premounting fuel line**

3 mm dia. drain hole 4 in exhaust silencer 3. Mount exhaust end section 5 and lock with 4 blows of a staking punch.

- 1 Hose clamp [2x]
- 2 Exhaust pipe

**Premounting exhaust system**

Bend tab 2 of bracket 1 by 90°. Apply corrosion protection at bending point.

**Preparing bracket**

**Preparing Installation Location**

Position bracket 2 and align it parallel to bumper edge 3.

- 1 Bumper
- 4 Copy hole pattern, 7mm dia. hole [3x]

**Copying hole pattern**

- 1 M6x20 bolt, pin lock [3x each]

**Premounting bolts**

- 1 Combustion air pipe
- 2 Flanged nut [3x]
- 3 Bracket
- 4 48mm p-clamp
- 5 Silencer

Installing bracket

**Installing Heater**

- 1 5x15 Self-tapping bolt [3x]
- 2 M6x25 bolt, spring lockwasher, 15mm spacer nut

Installing heater

- 1 Combustion air pipe

Installing combustion air pipe

Wrap bumper and air filter housing 1 with insulation material 2.

Installing bumper

Position air filter 1 laterally in bumper.

**Installing  
air filter**

- 1 Connector of circulating pump wiring harness
- 2 Connector of heater wiring harness [2x]

**Mounting  
wiring harnesses**

**Fuel**

**CAUTION!**

Open the vehicle's fuel tank cap, ventilate the tank and then re-close the tank lock.

Catch any fuel running off with an appropriate container.

Install fuel line and metering pump wiring harness so that they are protected against stone impact. Unless specified otherwise, always fasten using cable ties. Provide rub protection for fuel line and wiring harness in areas where there are sharp edges.

**WARNING!**

The fuel line and wiring harness are routed to the metering pump as shown in the wiring harness routing diagram.

Pull fuel line **3** and wiring harness of metering pump **1** into 2100mm long corrugated tube **2** and route into the engine compartment (see engine compartment wiring harness routing).

Installing lines

Route wiring harness of metering pump and fuel line into 10mm dia., 2100mm long corrugated tube **1** to the firewall (see fuel).

Installing lines

Cut open 17mm dia., 200mm long corrugated tube **2** lengthwise and slide onto wiring harnesses of heater, heater control and earth wire. Route wiring harness of heater control in 10mm dia., 1130mm long corrugated tube **1** to the firewall.

Installing lines

Route 10mm dia., 2100mm long corrugated tube **1** and 10mm dia., 1130mm long corrugated tube **4** through rubber-coated pipe clamp **2**. Route corrugated tube **1** further on the firewall to the underbody.

**3** M6x20 bolt, spring lock washer, 29mm dia. rubber-coated p-clamp, existing threaded hole

**Installing lines**

**1** Fuel line and wiring harness for metering pump in corrugated tube

**Installing lines**

**1** Fuel line and wiring harness for metering pump in corrugated tube

**Installing lines**

**1** Discard section  
**2** Perforated bracket

**Preparing perforated bracket**

Remove and discard rubber plug at position 1. Insert M6 rivet nut 1 into existing hole.

- 2 M6x20 bolt, spring lockwasher
- 3 Perforated bracket
- 4 M6x25 detent edged bolt, pin lock

**Mounting perforated bracket**

- 1 Metering pump
- 2 Receptacle for metering pump
- 3 Support angle bracket
- 4 M6 flanged nut

**Installing metering pump**

Pin assignment is not relevant.

61

**Completing connector of metering pump**

Check the position of the components; adjust if necessary. Check that they have freedom of movement.

- 1 Fuel line of heater
- 2 Hose section, 10 mm dia. clamp [2x]
- 3 Wiring harness of metering pump, connector mounted

**Connecting metering pump**

Remove and dismantle fuel-tank sending unit 1 according to manufacturer's instructions.

- 2 Large diameter washer, dia. da = 14.8mm
- 3 Copy hole pattern, 6 mm dia. hole

**Fuel extraction**

Shape fuel standpipe 1 according to template and cut to length.

**Mounting fuel standpipe**

Install fuel-tank sending unit according to manufacturer's instructions.

- 1 2100mm long corrugated tube
- 2 Fuel line
- 3 Hose section, 10 mm dia. clamp [2x]

**Connecting fuel line**

Check the position of the components; adjust if necessary. Check that they have freedom of movement.

- 1 Hose section, 10 mm dia. clamp [2x]
- 2 Fuel line of fuel standpipe

**Connecting metering pump**

### Coolant Circuit LS 460

**WARNING!**

Any coolant running off should be collected using an appropriate container. Install hoses so that they are kink-free. Unless specified otherwise, always fasten using cable ties. Position clamps so that other hoses cannot be damaged. When installing the hoses, the heater must be filled with coolant. The connection should be modelled on an "inline" circuit and based on the following diagram:

Coolant routing diagram

All spring clips  = 25mm dia. **1** = Original vehicle spring clip . **3** = 90° T-piece  !  
**2** = Black (sw) rubber isolator  All connecting pipes  and  = 18x18mm dia.  
**4** = Check valve .

- 1 Discard clip
- 2 Cutting point
- 3 Discard section

Cutting to length water hose H

- 1 Slide spring clip onto hose [2x]
- 2 T-piece

Premounting T-piece

Pay attention to the direction of flow of check valve 3. Slide 100mm heat shrink plastic tubing 1 onto hose H and shrink.

- 2 Position black (sw) rubber isolator

Premounting check valve

- 1 70mm long narrow edge protection
- 2 50mm long broad edge protection

Installing edge protection

- 1 Discard hose section on heat exchanger outlet
- 2 Discard hose section on engine outlet

Cutting point

Bend pipe of heat exchanger inlet 1 if necessary towards the engine.

Connecting hose H

Install hose I with shortened side on connection piece of engine outlet 1.

Connecting hose I

Align T-piece and ensure sufficient distance from pulley at position 2.

- 1 Pipe of heat exchanger outlet

Connecting T-piece

1 Align black (sw) rubber isolator

Connect-  
ing hose K

Install hose B on T-piece. Fasten black (sw) rubber isolator 3 with cable tie 1 [2x].

2 Hose H fastened with cable tie

Connect-  
ing hose B

Ensure sufficient distance between pulley 2 and hose B at position 1.

Checking  
distance  
from pulley

1 M6 rivet nut in existing hole

Installing  
rivet nut

1 Dismantle original vehicle bolt

Preparing installation of circulating pump

1 Shorten large diameter washer

Preparing installation of circulating pump

1 Perforated bracket

Angling down perforated bracket 2x 90°

- 1 48mm dia. rubber-coated p-clamp
- 2 Mount M6x20 bolt, flanged nut loosely
- 3 Perforated bracket
- 4 Circulating pump

Preparing circulating pump

Align circulating pump. Tighten M6x20 bolt, flanged nut.

- 1 Install wiring harness of circulating pump
- 2 Original vehicle bolt

Installing circulating pump

Connecting hose B

- 1 Hose D with 90° connecting pipe

Connecting hose C

- 1 Cable tie

Connecting hose F

Shape rubber-coated 48mm dia. p-clamp 1 as shown.

**Shaping rubber-coated p-clamp**

- 1 M6x20 bolt, spring lockwasher
- 2 M6x20 bolt, flanged nut M6
- 3 Cable tie
- 4 Rubber-coated pipe clamp
- 5 Angle bracket

**Routing in engine compartment**

Ensure sufficient distance to neighbouring components.

- 1 Spacer bracket

**Connecting hose F**

Coolant Circuit LS 600h

**WARNING!**

Any coolant running off should be collected using an appropriate container. Install hoses so that they are kink-free. Unless specified otherwise, always fasten using cable ties. Position clamps so that other hoses cannot be damaged. When installing the hoses, the heater must be filled with coolant. The connection should be "inline" based on the following diagram:

Hose routing diagram

All spring clips  = 25mm dia. **1** = Original vehicle spring clip . **3** = Original vehicle water pump. **2** = Black (sw) rubber isolator  All connecting pipes  and  = 18x18mm dia. **4** = Check valve . **5** = 90° T-piece  !

- 1 Original vehicle spring clips will be required again [2x]
- 2 Dismantle pipe group
- 3 Remove and discard hose section on heat exchanger outlet

Cutting point

Align pipe end 1 by 15mm in the direction of the arrow, see following Figure. Prevent breaking of pipe.

Aligning pipe group

- 1 Pipe group installed

Installing pipe group

- 1 Discard clip
- 2 Cutting point
- 3 Discard section

Cutting to length water hose G

Pay attention to the direction of flow of check valve **5**. Slide 100mm heat shrink plastic tubing **1** onto hose **G** and shrink. Cut 300mm braided protection hose **3** to length and slide onto hose **I**.

- 2** Slide on 50mm heat shrink plastic tubing [2x] and shrink
- 4** Position black (sw) rubber isolator

**Premounting check valve**

- 1** Position black (sw) rubber isolator

**Premounting hose E**

- 1** Pipe of heat exchanger inlet

**Connecting hose G**

Install hose **H** with shortened side on connection piece of engine outlet **1**.

**Connecting hose H**

Fasten hose I with cable tie 1.

- 2 Fasten check valve with cable tie [2x]
- 3 Remove original vehicle hose
- 4 Align black (sw) rubber isolator

**Fastening hoses**

Ensure sufficient distance between pulley 1 and hose G at position 2.

**Checking distance from pulley**

1 Discard section

**Cutting original vehicle hose to length**

- 1 Original vehicle hose
- 2 T-piece

**Premounting T-piece**

- 1 Original vehicle hose [2x]
- 2 T-piece

**Assembling original vehicle hose**

Shape rubber-coated 48mm dia. p-clamp 1 as shown.

**Shaping rubber-coated p-clamp**

Discard original vehicle bolt at position 3. Install 5mm shim between angle bracket 1 and body.

- 2 M6x20 bolt, 48mm dia. rubber-coated p-clamp, flanged nut
- 3 M6x20 bolt, spring lockwasher, 5mm shim, original vehicle threaded hole

**Installing rubber-coated p-clamp**

- 1 70mm long narrow edge protection
- 2 50mm long broad edge protection

**Installing edge protection**

Route hose **A** and **E** through rubber-coated p-clamp **1**.

**Routing hose A and E**

**1** Dismantle original vehicle bolt

**Preparing installation of circulating pump**

**1** Shorten large diameter washer

**Preparing installation of circulating pump**

**1** Perforated bracket

**Angling down perforated bracket 2x 90°**

- 1 48mm dia. rubber-coated p-clamp
- 2 Mount M6x20 bolt, flanged nut loosely
- 3 Perforated bracket
- 4 Circulating pump

**Preparing circulating pump**

Align circulating pump. Tighten M6x20 bolt, flanged nut.

- 1 Install wiring harness of circulating pump
- 2 Original vehicle bolt

**Installing circulating pump**

**Connecting hose A**

- 1 Hose C with 90° connecting pipe

**Connecting hose B**

1 Cable tie

Connect-  
ing hose E

## Final Work

### WARNING!

Mount removed parts in reverse order. Check all hoses, clamps and all electrical connections for firm seating. Insulate and tie back all loose wires.

Only use manufacturer-approved coolant. Spray the heater components with anti-corrosion wax (Tectyl 100K, Order No. 111329).

### Activation of hybrid system

Re-activate the hybrid system before connecting the 12V vehicle battery!

- **Connect the battery**
- **Fill and bleed the coolant circuit according to the vehicle manufacturer's specifications.**
- **Adjust digital timer, teach Telestart transmitter**
- **Make settings on A/C control panel according to the "Operating Instructions for End Customer".**
- **Checking of fan function (IPCU):**  
Set fan power to maximum. Afterwards, deactivate ignition and activate parking heater. Upon reaching the start-up temperature of 50°C, the fan speed has to correspond to the value predefined by the IPCU, about 1/3 of the maximum rotational speed.
- **Apply the caution label "Switch off parking heater before refilling" in the area of the filler neck.**
- **For initial startup, the Webasto Thermo Test Diagnosis is to be carried out as follows:**
  - Control coolant pump under component test menu, check coolant level.
  - Pre-feed fuel for the heater using the line filling menu.
  - Check CO<sub>2</sub>-Setting, gather adjustment values from general installation instructions.
  - Check all water and fuel connections for seal tightness and firm seating during the trial run.
  - Conduct troubleshooting in case of malfunctions.

Cut out wheel-well inner panel 1 at the markings. Discard section 2.

**Cutting out wheel-well inner panel**

1 Position exhaust end section at the centre of the recess

**Exhaust end section**

## Operating Instructions for LS 460 Automatic A/C

Please remove page and add to the vehicle operating instructions.

### Note:

We recommend matching the heating time to the driving time.  
Heating time = driving time

### Example:

For a driving time of approx. 20 min. (in one direction), we recommend not exceeding a switch-on time of 20 min.

Passenger compartment monitoring, if installed, must be deactivated in addition to vehicle settings for the heating operation.

Instructions on deactivation can be taken from the operating instructions of the vehicle.

Before parking the vehicle, make the following settings:

- 1 Set temperature to "HI" [2x]
- 2 Air outlet to windscreen on both sides

**A/C control panel**

- 1 20A heater fuse F1
- 2 30A main fuse F2 of passenger compartment

**Engine compartment fuses**

- 1 1A fuse F3 of heater control
- 2 25A fan fuse F4

**Passenger compartment fuses**

## Operating Instructions for LS 600h Automatic A/C
